IN THE CLAIMS:

Please amend Claims 1, 6, 11 and 16 as provided below.

1. (Currently amended) A method of using a desktop upon turning on a computer system, the computer system having a network address, the network address being made partly of a number assigned to a network and partly of a number assigned to the computer system ~~consisting of an address assigned to a network and an address assigned to the computer system~~, the method comprising the steps of:

determining whether more than one desktop exist on the computer system; and

selecting one of the desktops to use if more than one exist, said selecting step includes the step of comparing the address number assigned to the network of the network address of the computer system with an address a number assigned to a network of a stored network address and the step of using the selected desktop if the two compared addresses numbers are the same.

2. Canceled.
3. Canceled.

5. Canceled.

6. (Currently amended) A computer program product method on a computer readable medium for using a desktop upon turning on a computer system, the computer system having a network address, the network address being made partly of a number assigned to a network and partly of a number assigned to the computer system ~~consisting of an address assigned to a network and an address assigned to the computer system~~, the computer program product comprising:

code means for determining whether more than one desktop exist on the computer system; and

code means for selecting one of the desktops to use if more than one exist, said selecting code means includes code means for comparing the ~~address~~ number assigned to the network of the network address of the computer system with ~~an address~~ a number assigned to a network of a stored network address and the step of using the selected desktop if the two compared ~~addresses~~ numbers are the same.

9. Canceled.

10. Canceled.

11. (Currently amended) An apparatus for using a desktop upon turning on a computer system, the computer system having a network address, the network address being made partly of a number assigned to a network and partly of a number assigned to the computer system ~~consisting of an address assigned to a network and an address assigned to the computer system~~, the apparatus comprising:

means for determining whether more than one desktop exist on the computer system; and

means for selecting one of the desktops to use if more than one exist, said selecting means includes means for comparing the ~~address~~ number assigned to the network of the network address of the computer system with an ~~address~~ a number assigned to a network of a stored network address and the step of using the selected desktop if the two compared ~~addresses~~ numbers are the same.

14. Canceled.

15. Canceled.

16. (Currently amended) A computer system for using a desktop upon being turned on, the computer system having a network address, the network address being made partly of a number assigned to a network and partly of a number assigned to the computer system ~~consisting of an address assigned to a network and an address assigned to the computer system~~, the computer system comprising:

at least one memory device for storing code data; and

at least one processor for processing said code data to determine whether more than one desktop exist on the computer system, to select one of the desktops to use if more than one exist, by comparing the ~~address~~ number assigned to the network of the network address of the computer system with ~~an address~~ a number assigned to a network of a stored network address and by using the selected desktop if the two compared ~~addressee~~ numbers are the same.
